

Software Test Report

Project: Letterbox'd
Tested by Tome Ben Daniel
19.8.2024

Entry Criteria & Exit Criteria

- The feature list for the current Letterbox'd test cycle has been written.
- All testing environments have been set up and configured.
- Test data such as accounts, lists and movies are present on the app.
- All scheduled tests have been done.
- A Test Summary Report, detailing the testing activities, results, and findings, has been compiled, reviewed, and approved by the QA team.
- At least 90% of critical tests have passed

Objective S

- The objectives of this Test Plan are:
 - Define the methods for the testing period.
 - Specify the types of tests to be conducted.
 - Develop a timeline for testing activities.
 - Define the requirements for the application to be accepted and create a pass/fail requirements.

Features that were tested

- **Registration & Logging In:** 14/07/2024
- **Lists:** 14/07/2024
- **Reviewing & Editing:** 20/07/2024
- **Movie Page:** 27/07/2024
- **Searching & Filters:** 29/07/2024

Testing Approach

The main approach for testing was exploratory since I was not given a design document. I tested the site as though I was a regular user and attempted to see if I can find errors or things that did not work as I would expect them to by logic or knowledge with other websites.

Platform Details

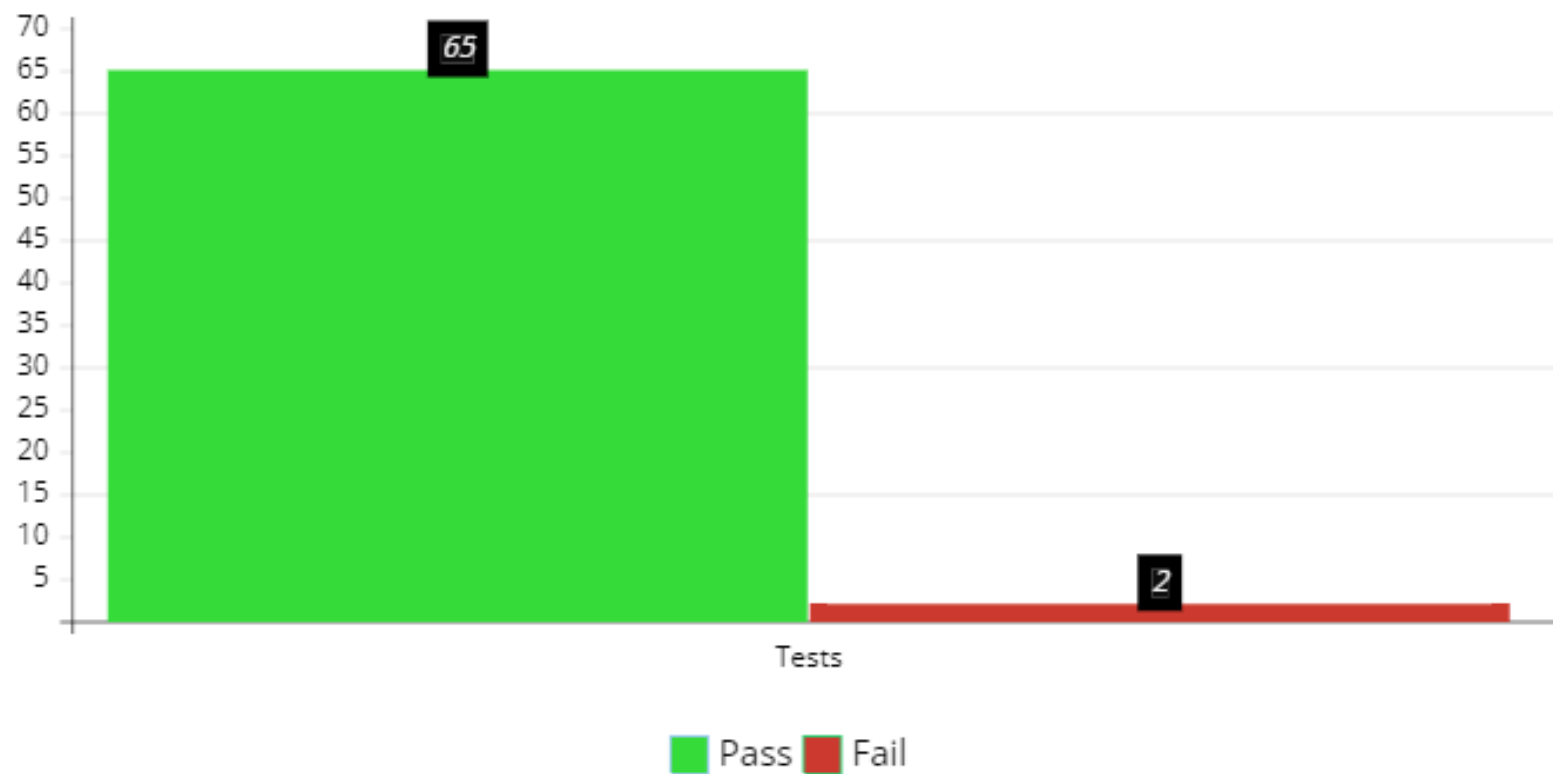

I was tasked with testing the mobile version of the website and thus I have used only my phone and sometimes my computer with the dev tools enabled to simulate a phone.

I have used:

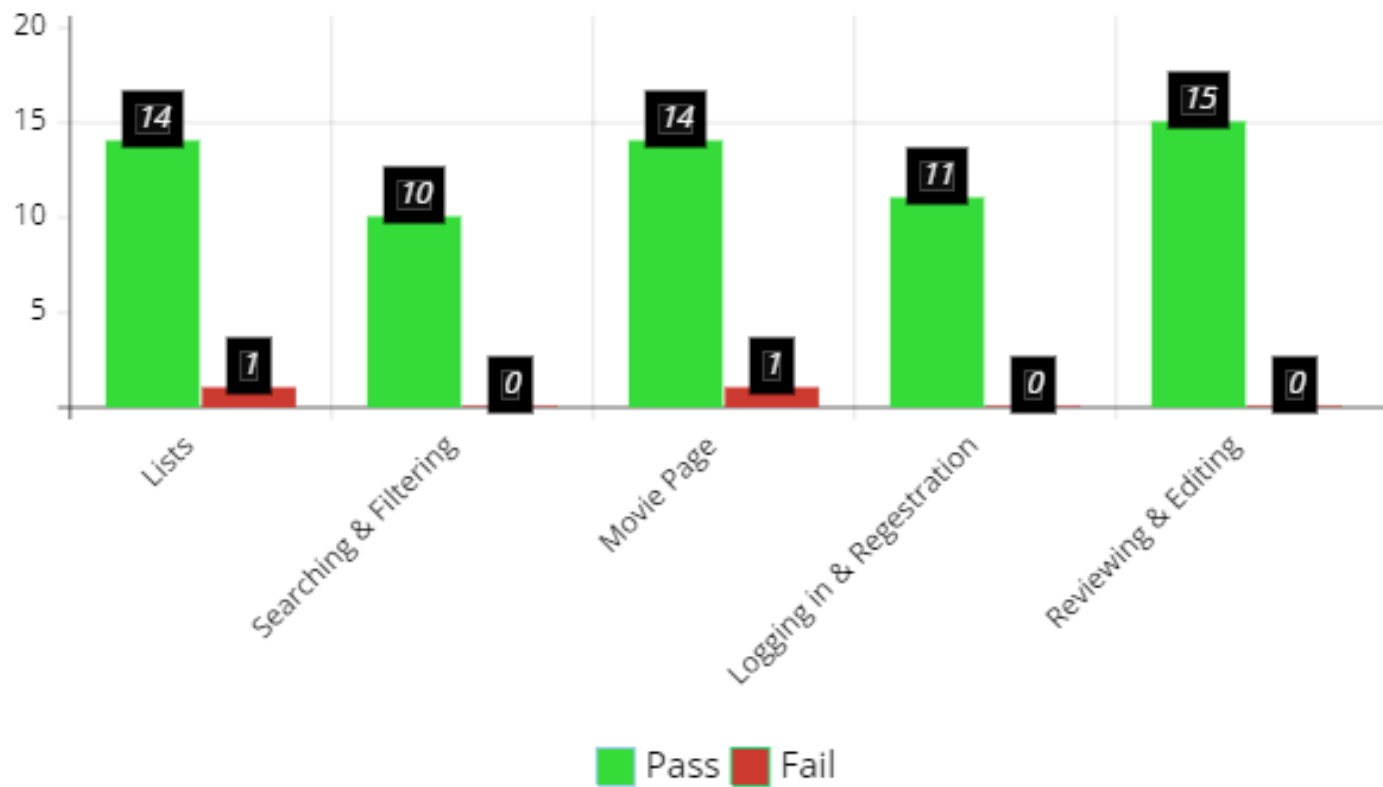

An android phone

A computer running windows 10 while using google chrome

Overall Tests

Tests Per Feature

Conclusions

In the current state the application and website Letterbox'd are in near perfect condition, the 2 bugs that were encountered are completely negligible and the website can be launched as is.
